

Date: November 12, 2019

ADVISORY NOTICE: Change of Clean Room Operating Parameters Monitoring Hardware.

Hardware Validation Change Completion Date: November 12, 2019

This letter is our official notice that we have instituted a change to the clean room monitoring hardware. The clean room operating conditions are monitored and recorder per BRM procedure MD.6.P.410 Monitoring Operating Conditions for Department 137 Clean Room. It was determined the clean room's monitoring hardware was no longer compatible with improvements in BRM's computer network hardware. The monitoring hardware was out dated. The Allen Bradley Panel view was upgraded.

This change required an IQ and OQ for the new hardware. The IQ and OQ are available for review. Please advise if you would like to receive a copy of the IQ and OQ.
